EDUCATION

Bachelor of Science in Software Engineering 2022 – 2026
Bahir Dar University
Modules Included:
• Data Structure and Algorithms
• Object-Oriented Programming (OOP)
• Discrete Mathematics
• Software Architecture & Design Patterns
• Database Management Systems
• Computer Networking
• Operating Systems & Memory Management

CGPA: 3.84/4.00

High-school Diploma 2017 – 2022
Bahir Dar Academy
• Natural Sciences Stream 2017
• Ranked in the Top 0.01% nationwide for ESSLCE

PROFESSIONAL SUMMARY

Backend Web Developer August 2025 – May 2026
Enscaler Remote
Developing scalable APIs and server-side logic for international clients for ERP and Logistics systems

Backend Engineering Intern March 2025 – September 2025
Quantum Technologies PLC Addis Ababa, Ethiopia
Gained experience in modern backend frameworks and cloud deployment while working on various projects.

Backend Web-Development Intern January 2025 – February 2025
Prodigy Info Tech Remote
Gained proficiency in backend architecture, API design, and industry standard development workflows.

SKILLS

Web Development and Engineering
Technical Stack:
• **System Design and Architecture**
• **Backend**: Spring Boot, Laravel, FastAPI, Django, and Django REST Framework, Ruby on Rails.
• **Frontend**: JS, TS, React, NextJS
• **Mobile Apps Development**: Dart and Flutter
• **DevOps & Deployment**: Docker, CI/ CD pipelines, Render, Koyeb, and Vercel.

DBMS and Schema Design
• MSSQL
• POSTRGRESQL
• MYSQL
• MONGODB

Data Structure and Algorithms
Python and C++

CLIENT PROJECTS

Tana Shops Management May 2026 – August 2026
Built a complete shop management platform for a kid's clothing seller. The platform is a web-app admin to oversee the shop flow to manage stocks and orders plus a telegram mini-app client interface where users can browse listings, place orders and track history

VAS V2
A platform that lets businesses sell mobile airtime to their customers in bulk. Partners can send top-ups to phone numbers through a simple integration, while the system tracks balances, applies discounts, and records every transaction. An internal dashboard gives operators tools to manage partners, monitor sales, and handle wallet deposits and refunds when something goes wrong.

gospelfornations.com
A bilingual (Amharic/English) church ministry website featuring teachings with video/audio/text filtering and YouTube embeds, Supabase-backed news publishing, a Cloudinary-integrated photo gallery with lightbox, donations section with Ethiopian bank accounts, a Formspree contact form, and a password-protected admin panel for managing content.

PERSONAL PROJECTS

LogForge
Logforge is a multi-platform, simple and easy to integrate audit logging package(DevTool) for popular backend frameworks like Django, Laravel and FastAPI. it is published on PyPi and Packagist.

(More of my projects can be found on my personal portfolio website)

Findra
Full-stack app for discovering opportunities, matching them to user profiles/preferences, and providing AI-assisted tools such as CV extraction, cover letter generation, and skill gap analysis. Includes a Next.js frontend, Django REST API backend, Celery workers, and a separate Telegram bot service for notifications/alerts. Background work can run via Celery/Beat or via secured /api/cron/* endpoints (for external schedulers).

Kiray
Kiray is a peer-to-peer rental marketplace where people can lend everyday items instead of buying things they only need briefly. Users browse listings, request rentals, and move through a clear process from approval and payment to pickup and return. The platform is built to make sharing feel safer with verification, guided steps, and confirmation at each stage.

CERTIFICATES

English Proficiency
ELTS 7.5 Band Score

Python Data Structures

Cursor Hackathon
Participated in a Hackathon prepared by Cursor

VOLUNTARY WORK

Tutorial teacher
Bahir Dar Full Gospel Church

Sunday School Teacher
North Bahir Dar MKC
